Motives of FLYWO

FLYWO

With all the demands of family and work, many women do not make their own health a priority. According to Centers for Disease Control and Prevention, in U.S., there are 13.4% of women aged 18 or over are in fair or poor health, and that has something to do with women's unawareness of possible diseases.

That's why we want to launch a new application, named FLYWO-Flying Woman, which can help women to know more about the health conditions of their surroundings.

Future Goals

1

Ability to Connect with Sensors

Adaptable to connecting with other hardwares in order to make the searching more accurately

3

Health Recommendations

Push recommendations on hospitals and medicine according to diseases

2

Alert Functions

Notify users when sensing factors which might be harmful to health

4

UI Design

More attractive and clearer UI design.

THANK
YOU!
